

Yuki Nakamura

AI-Powered Full-Stack & Mobile Developer

 nyuki6589@gmail.com  Akashi, Hyogo, Japan  nyuki6589.netlify.app  github.com/kitsune121

Summary

AI-Powered Full-Stack and Mobile Developer with professional experience in creating responsive web and mobile applications using React, React Native, TypeScript, and modern backend technologies. Skilled in developing reusable interfaces, integrating REST APIs, and working across full-stack application layers. Committed to solving production UI and integration challenges, ensuring applications are clean, maintainable, and user-friendly for international teams and clients.

Technical Skills

AI & Intelligent Applications

- AI-Powered Applications
- AI API Integration
- AI-Assisted Development
- AI-Driven UI & Features
- AI Application Architecture

Mobile

- React Native
- Android Studio
- Responsive Mobile UI

Frontend

- HTML5
- CSS3
- JavaScript (ES6+)
- jQuery
- TypeScript
- React
- Angular
- Responsive & Accessible UI

Database

- MySQL & PostgreSQL & MongoDB

Backend

- Node.js
- Python
- PHP
- C#
- C++

Experience

Frontend / Web Developer, Contract / Freelance

01/2023 – 12/2025

- Built and shipped responsive React applications used across desktop, tablet, and mobile breakpoints, focusing on reusable component architecture.
- Integrated frontend applications with REST APIs and backend services, handling dynamic JSON data and client-side state management.
- Reduced recurring UI bugs by refactoring shared components into a single reusable library, cutting duplicate code across screens.
- Worked across React, Angular, Node.js, PHP, SQL, and MySQL, adapting to each project's existing stack rather than a single fixed toolchain.
- Applied accessibility and cross-browser compatibility standards to production interfaces, reducing post-release UI fixes.
- Developed working knowledge of React Native for cross-platform mobile builds, extending frontend skills into mobile delivery.

Projects

AI Chat Assistant

An intelligent AI-powered assistant built with Retrieval-Augmented Generation (RAG) technology. It allows users to interact with documents, search information efficiently, and receive accurate AI-generated responses using modern language models and real-time data integration.

Tech Stack: Next.js · OpenAI · LangChain · Vector Database

Crypto Wallet App

A secure and intuitive cryptocurrency wallet application designed to manage digital assets with a clean mobile experience. The app provides real-time market information, portfolio tracking, and a user-friendly interface for managing crypto investments.

Tech Stack: React Native · Expo · TypeScript · API Integration

E-commerce Platform

A full-stack e-commerce platform designed for modern online shopping experiences. It provides product management, shopping cart functionality, secure payments, and an administration dashboard for managing business operations.

Tech Stack: Next.js · Node.js · MongoDB · Payment API

Portfolio Website

A modern developer portfolio website designed to showcase skills, projects, and professional experience with an interactive and visually engaging interface. Built with advanced animations, responsive layouts, and optimized performance.

Tech Stack: React · Next.js · Tailwind CSS · Framer Motion

Education

B.Sc. Computer Science, Tokyo Institute of Technology

- Bachelor of Science in Computer Science
- Strong academic foundation in software development, programming, databases, and core computer science principles.

2023
Tokyo, Japan

 Languages

Japanese
Native

English
Conversational / Working Proficiency

 Strengths

- Clean, maintainable code
 - API integration
 - Cross-platform development
 - Fast adaptation to new stacks
- Component-based architecture
 - Debugging & problem-solving
 - Clear communication
